

firewool

A natural tinder made from birch tree bark

A fast way to start a stable, reliable fire: outside, in a fireplace or barbecue, even in the worst weather conditions.

Ferrocerium ignitor & birch tree bark tinder

Since time immemorial, birch tree bark has been considered the best and fastest material with which to start a fire. We have developed a tinder that allows even the inexperienced to quickly and easily start a stable fire. firewool quickly and efficiently catches the sparks from the ignition blade. The flame is very hot, lasts for a long time, and works even in difficult weather conditions.

firewool is THE fire-starting kit.

Being an all-in-one kit, firewool fits in your pocket so is always there when you need it. The packaging provides a secure storage for the tinder and the ignitor. The easy-to-open container is waterproof and stays afloat even when full, making it perfectly suited for any activity near or on the water.

The tinder consists of climate-neutral birch tree bark. The ignitor is made from Austrian ferrocerium. The interaction of the firewool components immediately generates a strong and reliable flame.

firewool – finally starting fire the original way!

The kit has an unlimited lifespan and is safe to use.

firewool is a byproduct of the bm1 manufacturing process

How it works

Scratch off the oxide layer from the ignitor before using it for the first time

Press firewool together and hold it up with the ignitor stick

1 Take a pinch of firewool out of the container and put it on an even surface

3 Applying pressure, slide the blade of the ignitor down the stick, stopping shortly before it touches the firewool.

Please make sure you dispose of your old lighters in an environmentally friendly way. You will not miss them..
